The Mile Run: Prove Lap Counts

Coach participants with real time split results as they pass. The system uses long range RFID tags. See in direct sun-light. The battery powered display provides a coaching competitive advantage over stop watches. The only display that times multiple runners with 1/10th of a second accuracy. Stop watches are on average are 2 seconds accurate. Olympic training centers say elite athletes improve only 1/10th second per day. This means training using stop watches are not as effective as the Orbiter display. No cables or wires. Just turn "On" and Go!

ADA Barrier Free. US Patent 8085136
